Dear Printing Research,

Super Blue 3 is unbelievable! On November 3, 2008 we installed the new systems on our KBA 10 color press. Since that time, on May 11, 2010 we have printed more than 40 MILLION sheets using Super Blue 3 and counting!

Super Blue 3 anti-marking systems seem to clean themselves inside the image area. Since installing this product I have not had to worry about losing time by stopping the press to wash the transfers. I can keep my press running even when changing paper sizes. This truly is a superior anti-marking system.

Best Regards,

Pressman

Super Blue
Attn: Christina Hernandez
P.O. Box 678153
Dallas, TX 75267

Dear Christina:

The Super Blue 3s' have worked very well for us and are a big improvement over the other anti-marking systems we have used in the past.

The biggest advantage to the Super Blue 3's is that if necessary we can clean any ink or powder off of them, restoring them to a like-new condition. This was not possible with previous systems.

Sincerely,

Wayne Welkner
President

Dear Printing Research,
I just want to tell you how much we appreciate your Superblue 3 System. We have the Superblue 3 System on the Heidelberg Speedmaster 52 4 color and the Heidelberg GTO 52 4 color. Both machines are 2/2 perfectors. Since we installed the Superblue 3 Systems in January 2009, we have eliminated washing of transfer cylinders by hand 100%. There is just no need to wash anymore because the material seems to be self cleaning and except on the very outside of the transfer cylinders or a little on the tail end outside of the image area, there is no ink residue on the Superblue 3 System. This helps our company to be more competitive in the way we schedule our machines. We can run more sheets through the press since we don't ever have to spend time washing the transfers cylinders by hand every time we have a paper size change. This is by far the best investment we have made in many years for these two machines and it makes printing easier.
